REVISION HISTORY

Revision	Date	Changes
1.0.0	November 11, 2004	Initial Release
1.0.2	November 17, 2005	Updated for Release 2 software

1. Scope

1.1 Document Identification

This Interface Control Document (ICD) describes the interface between individual SunGuide clients and the Video Wall (VW) subsystem and between the VW subsystem and the associated drivers. The general base architecture of the XML communications including connection information, byte order and base transaction classes is delineated in the general ICD. This ICD defines Extensible Markup Language (XML) schemas upon which XML requests shall be based in communicating amongst the various processes. Refer to the SunGuide-General-ICD-1.0.2 document for details regarding data transfer.

1.2 Project Overview

The Florida Department of Transportation (FDOT) is conducting a program that is developing SunGuideSM software. The SunGuideSM software is a set of Intelligent Transportation System (ITS) software that allows the control of roadway devices as well as information exchange across a variety of transportation agencies. The goal of the SunGuideSM software is to have a common software base that can be deployed throughout the state of Florida. The SunGuideSM software development effort is based on ITS software available from both the states of Texas and Maryland; significant customization of the software is being performed as well as the development of new software modules. The following figure provides a graphical view of the software to be developed:

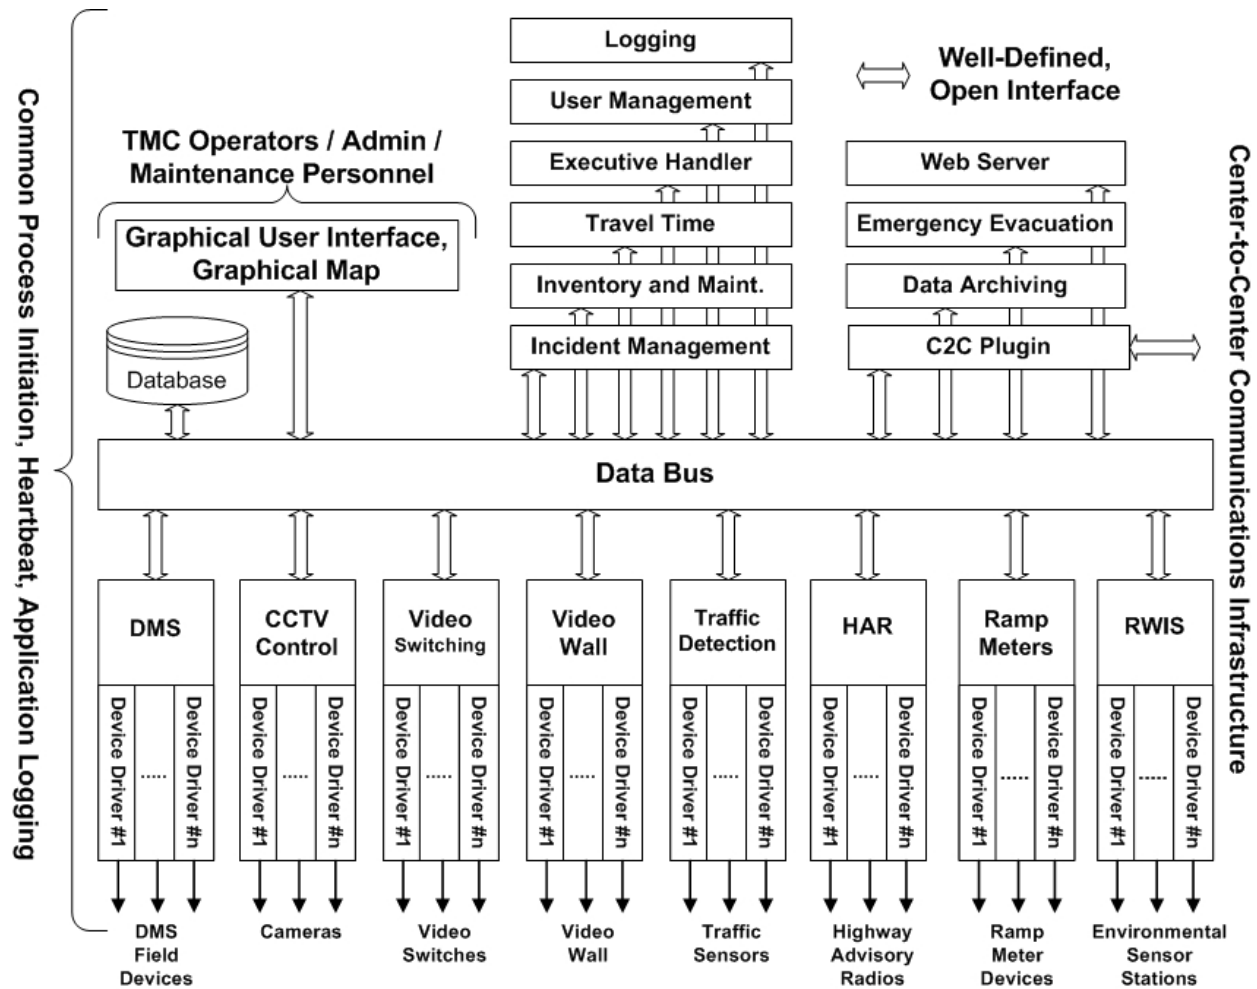

Figure 1.1 - High-Level Architectural Concept

The SunGuideSM development effort spans approximately two years. After the development, the software will be deployed to a number of Districts and Expressway Authorities throughout Florida and support activities will be performed.

1.3 Related Documents

The following documents were used to develop this document:

- SwRI Qualification Response: *Response to the Invitation to Negotiate (ITN): Statewide Transportation Management Center Software Library System, Negotiation Number: ITN-DOT-02/03-9025-RR*, SwRI Proposal No. 10-35924, dated: November 18, 2002.
- SwRI Technical Proposal: *Technical Proposal for Invitation to Negotiate (ITN): Statewide Transportation Management Center Software Library System, Negotiation Number: ITN-DOT-02/03-9025-RR*, SwRI Proposal No. 10-35924, dated: January 31, 2003.

- SwRI Cost Proposal: *Cost Proposal for Invitation to Negotiate (ITN): Statewide Transportation Management Center Software Library System, Negotiation Number: ITN-DOT-02/03-9025-RR*, SwRI Proposal No. 10-35924, dated: January 31, 2003.

1.4 Contacts

The following are contact persons for the SunGuideSM software project:

- Elizabeth Birriel, ITS Central Office, elizabeth.birriel@dot.state.fl.us, 850-410-5606
- Liang Hsia, FDOT Project Manager, liang.hsia@dot.state.fl.us, 850-410-5615
- John Bonds, Senior ITS Specialist, jbonds@pbsj.com, 408-873-2514
- David Chang, ITS Specialist, David.Chang@dot.state.fl.us, 850-410-5622
- Steve Dellenback, SwRI Project Manager, sdellenback@swri.org, 210-522-3914
- Robert Heller, SwRI Software Project Manager, rheller@swri.org, 210-522-3824
- Charlie Wallace, PBF Deputy Project Manager, WallaceC@pbworld.com, 352-374-6635
- John Schumitz, PBF Software Project Manager, schumitz@pbworld.com, 301-816-1852

The following are contacts that will be used by the SunGuideSM software project team to assure consistency with other FDOT projects and FDOT procedures:

- Dan Baxter, PB Farradyne, FDOT C2C Project, baxter@pbworld.com, 407-587-7809
- David Lambert, University of North Florida, RWIS, jlambert@unf.edu, 904-620-3881
- Bob Colins, PBS&J, Emergency Evacuation, bobcolins@pbsj.com, 850-575-1800
- John Fain, FDOT, Comptroller, john.fain@dot.state.fl.us, 850-921-7332
- Leslie Jacobson, PB Farradyne, Ramp Metering, jacobsonl@pbworld.com, 206-382-5290

2. Data

The following sections detail the XML transactions that can be exchanged between client and server applications.

2.1 Schema

The schemas for these transactions may be located in the Schemas1.0 directory. The objects directory contains common data schemas that are used by the various request/messages/responses. Schemas are organized in the following tree structure:

- vw
 - messages
 - [wallGeometryUpdateMsg.xsd](#)
 - objects
 - [activeDesktop.xsd](#)
 - [videoTour.xsd](#)
 - [wall.xsd](#)
 - requests
 - [activateLayoutReq.xsd](#)
 - [addTourReq.xsd](#)
 - [connectionReq.xsd](#)
 - [deactivateLayoutReq.xsd](#)
 - [deleteTourReq.xsd](#)
 - [modifyTourReq.xsd](#)
 - [refreshGeometryReq.xsd](#)
 - [retrieveDataReq.xsd](#)
 - [startVideoTourReq.xsd](#)
 - [stopVideoTourReq.xsd](#)
 - [subscribeReq.xsd](#)
 - responses
 - [activateLayoutResp.xsd](#)
 - [addTourResp.xsd](#)
 - [connectionResp.xsd](#)
 - [deactivateLayoutResp.xsd](#)
 - [deleteTourResp.xsd](#)
 - [modifyTourResp.xsd](#)
 - [refreshGeometryResp.xsd](#)
 - [retrieveDataResp.xsd](#)
 - [startVideoTourResp.xsd](#)
 - [stopVideoTourResp.xsd](#)
 - [subscribeResp.xsd](#)

Requests may be sent from a client to a subsystem or from a subsystem to a driver. Responses may be sent from a driver to a subsystem or a subsystem to a client. A message can be sent from any process to another process.

2.1.1 Subsystem communication

Initial communication to a subsystem is described in the general ICD. For VW, the video tours are retrieved from the database on startup, while the information about the video wall is retrieved from the video wall driver. Once a client has initiated the connection to VW, connection requests may be made, video tours may be started or stopped, and video wall layouts may be activated and deactivated. If the video wall has been modified outside of the VW subsystem, a client may send a request to refresh the geometry of the wall.

For video tours, the VW subsystem does not update the database for any tours added, modified or deleted. This is a function of the Video Switching (VS) subsystem. Active video tours are not persisted in VW.

The following table shows the various subscriptions a client may request. The last column shows the XML updates that will be received if a client has subscribed to this data.

Subscription	Description	Updates Received
wallData	Receive updates to video wall geometry information.	wallGeometryUpdateMsg
connectionData	Receive updates to the sources displayed on the video wall viewers.	connectionResp
tourData	Receive updates to video tours in the system.	addTourResp, modifyTourResp, deleteTourResp, startVideoTourResp, stopVideoTourResp
userData	Receive notification that user permissions have been modified.	updateSystemDataMsg

2.1.2 Driver communication

Initial communication from a subsystem to a driver is described in the general ICD. On the VW driver startup, the driver queries the video wall for the current configuration. Once the driver has current data, the VW subsystem may forward requests from clients to the appropriate driver.

2.2 Examples

For example, if a client wishes to connect a source to a viewer on the video wall, the client sends a connectionReq to the subsystem. Once the subsystem has verified the client has permission to perform this request, the request is then forwarded to the appropriate driver. The driver makes the connection and sends a connectionResp to the subsystem. The subsystem then sends this response back to the appropriate client and to any clients who have subscribed to connection data.

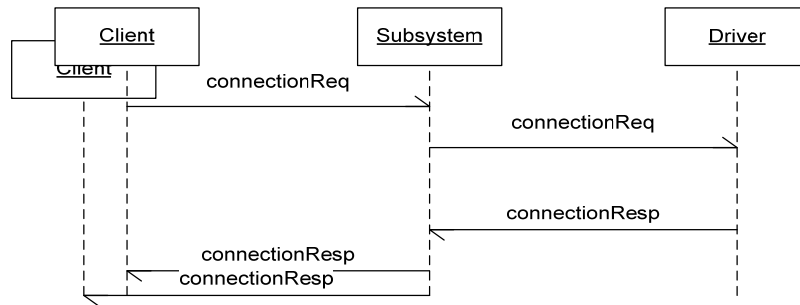

Figure 2 Sample Transaction

The tables below show which requests can be sent from client to subsystem and subsystem to driver. The responses sent from driver to subsystem and subsystem to client are also specified. Messages are sent when a response is not required.

2.3 Subsystem Schemas

FC (From client), TC (To client), TD (To driver), FD (From driver)

Usage Description	Requests	FC	TD	Responses	FD	TC	Messages	TD	FD	TC
Used for a client to activate a layout on a video wall.	activateLayoutReq	X	X	activateLayoutResp	X	X				
Used to add a tour to the list of tours in the VW subsystem.	addTourReq	X		addTourReq		X				
Used for a client to request a source be displayed upon a viewer.	connectionReq	X	X	connectionResp	X	X				
Used for a client to deactivate a layout on a video wall.	deactivateLayoutReq	X	X	deactivateLayoutResp	X	X				
Used to delete a tour from the list of tours in the VW subsystem.	deleteTourReq	X		deleteTourResp		X				
Used to modify a tour in the list of tours in the VW subsystem.	modifyTourReq	X		modifyTourResp		X				

Usage Description	Requests	FC	TD	Responses	FD	TC	Messages	TD	FD	TC
Used to request a refresh of the video wall geometry information. Also used by the VW subsystem when an activate or deactivate layout request is processed.	refreshGeometryReq	X	X	refreshGeometryResp	X	X				
Used to retrieve data from VW, data includes wall geometry, connection information, layouts, video tours, sources and users.	retrieveDataReq	X	X	retrieveDataResp	X	X				
Used for a client to request an existing video tour be started on a viewer.	startVideoTourReq	X		startVideoTourResp		X				
Used for a client to request an existing video tour be stopped on a viewer.	stopVideoTourReq	X		stopVideoTourResp		X				

Usage Description	Requests	FC	TD	Responses	FD	TC	Messages	TD	FD	TC
Used to subscribe to updates from the system. Data includes wall geometry, connection information, layouts, video tours, sources and users.	subscribeReq	X		subscribeResp		X				
Sent from the subsystem when the wall geometry has been updated. The driver also generates this message when a refresh geometry message is received.							wallGeometryUpdate Msg		X	X

2.4 Driver Schemas

TD (To driver), FD (From driver)

Usage Description	Requests	TD	Responses	FD	Messages	TD	FD
Used for a client to activate a layout on a video wall.	activateLayoutReq	X	activateLayoutResp	X			
Used for a client to request a source be displayed upon a viewer.	connectionReq	X	connectionResp	X			

Usage Description	Requests	TD	Responses	FD	Messages	TD	FD
Used for a client to deactivate a layout on a video wall.	deactivateLayoutReq	X	deactivateLayoutResp	X			
Used to request a refresh of the video wall geometry information. Also used by the VW subsystem when an activate or deactivate layout request is processed.	refreshGeometryReq	X	refreshGeometryResp	X			
Used to retrieve data from VW, data includes wall geometry, connection information, layouts, video tours, sources.	retrieveDataReq	X	retrieveDataResp	X			
Sent from the subsystem when the wall geometry has been updated. The driver also generates this message when a refresh geometry message is received.					wallGeometryUpdateMsg		X

3. Notes

Information about XML and schemas can be found at the World Wide Web Consortium (W3) website at <http://www.w3.org>.
